

SharePoint

ConnectYard’s social and mobile notification solution helps to expand the collaborative capabilities of the enterprise beyond office walls to more effectively engage employees in the field and factory helps Faculty reach students using their own personal devices and applications.

ConnectYard extends the reach of Microsoft SharePoint and Office 365 to today’s most popular social media and mobile devices. With more and more employees working remotely, ConnectYard enables organizations to bring the right people and information together instantly, by increasing the speed of communications, which ultimately raises productivity and reduces technology deployment, training and support costs.

ConnectYard’s application for SharePoint 2013 allows users to seamlessly send and receive alerts on their preferred communication channel, including Facebook, Twitter, LinkedIn and text message, which can speed message receipt and response times and create a more cohesive, connected work environment. You will also have the ability to share content with non-SharePoint users, including customers, partners, etc.

Features and Benefits

Integration with SharePoint

- Seamless integration into the SharePoint UI makes sending and receiving alerts easy.

Multimodal Communication

- Send alerts to any user, internal or external, via Facebook, Twitter, LinkedIn, text messages and email.

2-Way Communication

- Allow users to reply directly to alerts from popular social spaces, text-capable devices and email.

Alerts with Attachments

- Attach documents and files to alerts, including vCard and iCalendar attachments.

Opt-in Notifications

- Opt-in notification setting and unsubscribe features allow users to easily manage alerts.

Alert Blocking

- Alerts generated outside business hours can be blocked until the next business day.

Daily Summary

- Daily Summary combines notifications into a single email message, including all subsequent replies.

Centralized Management

- Centralized management by administrator with the ability to block some features if desired.

Robust Analytics

- Robust analytics provide the ability to verify the first and last time users view alerts.

Engagement Scoring

- Track and encourage participation with activity based user points and rewards.
