

SharePoint

ConnectYard's social and mobile notification solution helps Faculty reach students using their own personal devices and applications.

With the ever-expanding number of communication options that are available today to students, faculty and administrators, institutions are recognizing both the opportunity and necessity of extending communications beyond traditional email in order to facilitate greater student engagement and increased participation.

The ConnectYard App for SharePoint Online allows your institution to easily deliver important and timely notifications to students via SMS, Facebook, Twitter, LinkedIn and other places they are more likely to check and interact with than email. This serves to speed message receipt and response times as well as creates a more cohesive, connected learning environment.
